                                                                                          Ś
                                                                                                                                                                                                                 amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) cytostations and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For cexample, they may be used to treat disorders associated with decreased cexpression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to cuplement the patients own production of (I). Additionally, (I) colored and the patients own production of (I). Additionally, (I) colored acids into a host cell and culturing the cell to express the crotein. (I) proteins and polynucleotides may be used to prevent, conserved and cancer metastases of haematopoietic decides, especially connects and cancer metastases of haematopoietic decides and AAK64703 connects from the present invention. AAK54942 to AAK54950 and AAM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                          Query Match

                                                                                                                                                      밁
                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                  CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic contivity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and creatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased cc expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) CC supplement the patients own production of (I). Additionally, (I) croteins (I) proteins and polynucleotides may be used to proceed the secreted (I), by inserting the CC protein. (I) proteins and polynucleotides may be used to prevent, (CC diagnose and treat immune/haematopoietic-related diseases, especially CC cancers and cancer metastases of haematopoietic actived cells. AAK64703 cc AAK87694 represent human immune/haematopoietic antigen genomic CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169 crepresent sequences used in the exemplification of the present invention.
